ABSTRACT

This is the second volume of the Electronics and Telecommunications Dictionary, the third of the series of Chinese-English technical dictionaries under preparation by the Foreign Technology Division, United States Air Force Systems Command. The purpose of the series is to provide rapid reference tools for translators, abstracters, and research analysts concerned with scientific and technical materials from Mainland China. This dictionary contains about 45,000 terms selected from sources published in Mainland China. The terms included relate not only to general electronics, telecommunications, transistor electronics, computer technology, integrated circuits, etc., but also incorporate vocabulary from the basic sciences and the auxiliary technologies closely associated with electronics and telecommunications, such as navigation aids, automation, and television techniques. An alphabetic lookup system based on the "pinyin" spelling of Modern Standard Chinese is provided, as well as a character index for users less familiar with the pinyin system. (Author/CLK)
